

Spacing Guidelines for Residential Yard Trees

Knowing the type of soil, water needs, and eventual size of the tree will help you select the best tree for your yard.

If you plant more than one tree, make sure they are sited far enough apart to allow full growth of both trees. Trees should be placed 12 to 30 feet apart depending on their ultimate size

Plant at least 8 feet from sidewalks and driveways, 15 feet from home foundations and swimming pools, and 6 feet from fences.

Deciduous trees (trees that lose their leaves) will help cool your home in the summer and allow the sun to warm it in the winter.

Planting the right tree on the South, West, and East side of your home allows trees to shade your home and lower energy costs.

Spacing requirements by tree size

- Spacing from other trees
- Spacing from building foundations
- Spacing from sidewalks, curbs and driveways
- Spacing from limbs to overhead wires
- Spacing from trunk at maturity to in-ground electrical lines
- Spacing from trunk at maturity to in-ground gas lines

Large 45' tall and higher

Medium 25' to 45'

Small Up to 25'
